The Sky Tells a Story: In the east rise the hunter's two faithful companions, *Canis major* and *Canis minor*. *Procyon* is the bright star in the little dog, and rises minutes before *Sirius*, the brightest star in the sky. *Sirius*, dominates the SE sky by 7 PM, and as it rises, the turbulent winter air causes it to sparkle with shafts of spectral fire. Beautiful as the twinkling appears to the naked eye, for astronomers this means the image is blurry; only in space can we truly see "clearly now".

Plus the Usual: Handouts Gone Wild!! / RT Spirit Stick / Ticket Drawing / Closing
